## Press Release

---

November 2007

---

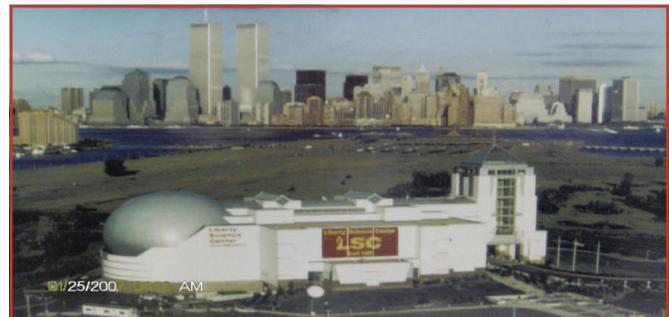

### **B.J. McGlone & Co., Inc. Wins Excellence in Construction Award**

For the second time in less than five years B.J. McGlone & Co., Inc. wins the coveted DISCA (Drywall Interior Systems Contractor Association) 2007 Excellence in Construction Award. The award was for McGlone's eight million dollar contract on the renowned Liberty Science Center.

B.J. McGlone & Co. Inc. furnished and installed metal framing, drywall, insulation, acoustical/metal/drywall ceilings, soffits, access doors, fire extinguisher cabinets, expansion joints, GRG columns covers, light gauge framed mediated theater seating, shaftwall systems, doors, frames, and hardware. McGlone's portion of the contract was performed in a twelve-month period beginning in November 2006.

B.J. McGlone & Co., Inc. was proud to be a subcontractor to, and part of the, Skanska USA Building Inc. team in constructing this unique and challenging project. This flagship project demonstrates again McGlone's ability to perform quality interior construction exceeding the expectation of its clients and end users.

Liberty Science Center Interior Walls and Ceilings

### **The Project**

The existing four-story building was completely renovated and a new addition totaling 295,000 square feet places this museum in an elite category. Offering a new kind of learning experience Liberty Science Center reopened its doors in October 2007 after a 22-month overall project schedule and a \$109 million upgrade of its exhibitions, program, and theater experiences in facilities that have been enlarged and modernized with improvements such as new restaurants and retail amenities. The purpose of the redesigned Center is to provide a unique and engaging resource about the science and technology that surround living, learning, and working in the NJ-NYC region.

Already established as a major destination and with a national model approach for connecting with schools and families across all socio-economic circumstances, as well as for its adaptive use of videoconferencing technology, Liberty Science Center is poised to redefine how a science center can offer greater public service.
