B.J. McGlone & Co., Inc. Wins Excellence in Construction Award

B.J. McGlone & Co., Inc. wins DISCA's Excellence in Construction Award 2011 for the Unique Project category. The Project, Actavis Packaging Facility, is located a stones throw from McGlone's main office in Edison, NJ. Actavis is one of the world's largest generic pharmaceutical manufacturers. Jacobs Engineering Group designed the 100,000 square foot existing warehouse to accommodate the generic medication packaging and distribution facility.

The general contractor, Henderson Corporation reached out to McGlone to design and build the facility due to its unusual requirements needed in the interior cold formed metal framing. The existing structure had a 33 foot clear ceiling height. The new design required interstitial levels at 16 and 19 feet above the finished floor. Besides providing a high ceiling, the intent was to support the massive dead load of extremely large mechanical equipment. Live load calculations were also required to periodically service the equipment. Twelve to Eighteen gauge joists with four distinct flange sizes were utilized to accommodate the

Actavis Packaging Facility, Edison, New Jersey

The Project

The finished gypsum walls and ceilings received a level five finish to support the high gloss epoxy paint in the packaging rooms as well as the modern office spaces that occupied the front of the building. The job required a highly organized effort between project engineers, managers, and field supervisors. Preparation was the key to success for both McGlone's project managers and engineers to secure the broad range of structural members required to ensure the integrity of the design intent.

McGlone's team approach and industry leading knowledge of structural framing resulted in a successful project that exceeded our clients' expectations.

B.J. McGlone & Co., Inc. is proud to have the Drywall Interior Systems Contractors Association (DISCA) present it with the "Excellence in Construction Award" in the Unique Project category for its Light Gauge Framing work performed at the Actavis Packaging Facility.
